Projeto idealizado pelo escritório OLIVEIRA COTTA ARQUITETURA. Participei dos desenhos de detalhamentos guardas corpos dos pavimentos tipos e cobertura, das bancadas dos banheiros e soleiras.

Para realizar os desenhos, tive que copiar os pavimentos tipos do arquivo final de revit para um arquivo novo, pois cada pavimento tinha como por exemplo sacadas de tamanhos e formatos diferentes.

CONDOMÍNIO PORTAL DO ALTO – LENE ARQUITETOS ARQUITETURA E INTERIORES

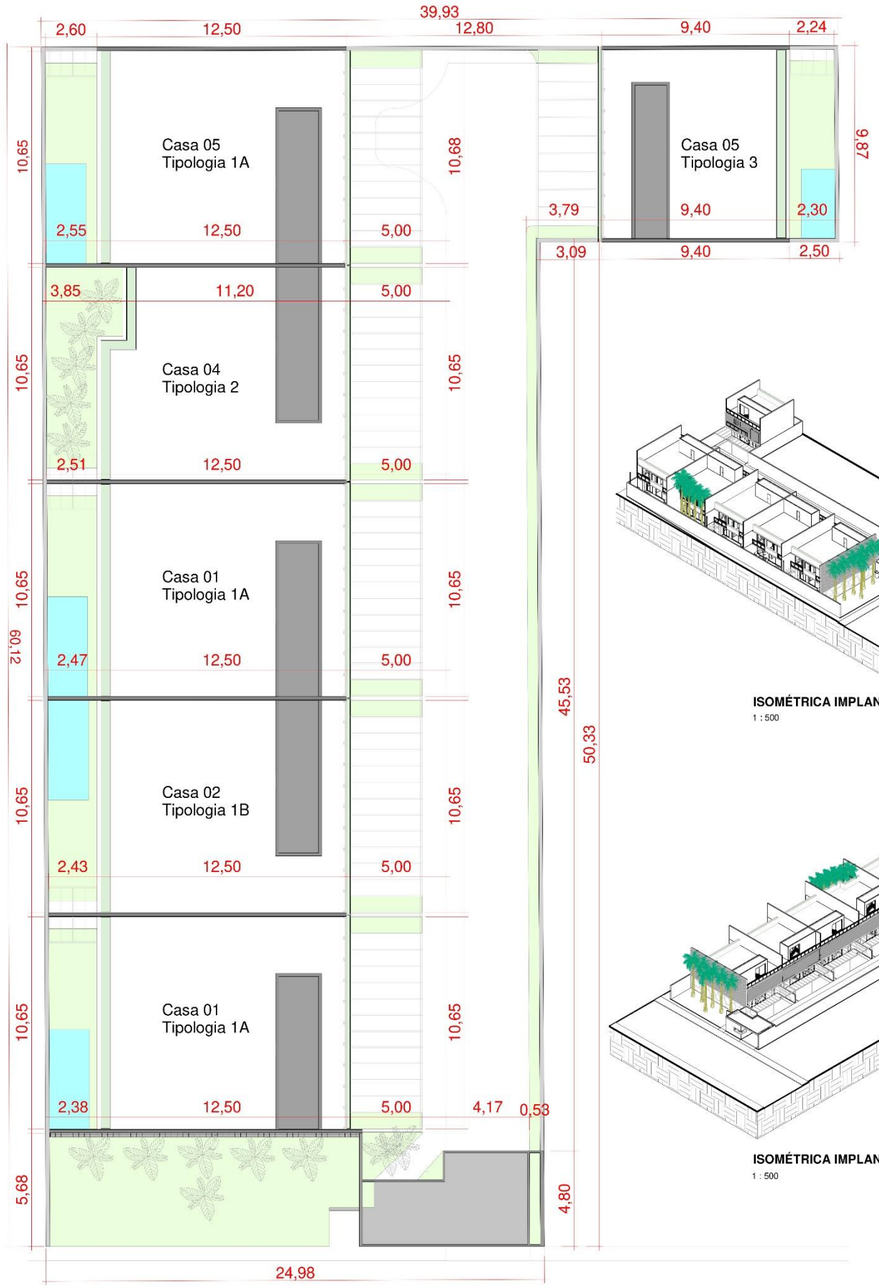

ARQUITETURA: Fábio Muzzeti / Henrique Affonsi / Hélcio Fernandes
COLABORADORES: Guilherme Muniz Luz
PROGRAMA UTILIZADO: Revit

Nesta projeto tive a oportunidade de fazer meu primeiro desenho executivo de um projeto usando o material em steel frame, muito pouco utilizado aqui no brasil. O bistro possui 164,36 m² de construção, contando o terreo, pavimento 1 e a cobertura onde fica a caixa d'água.

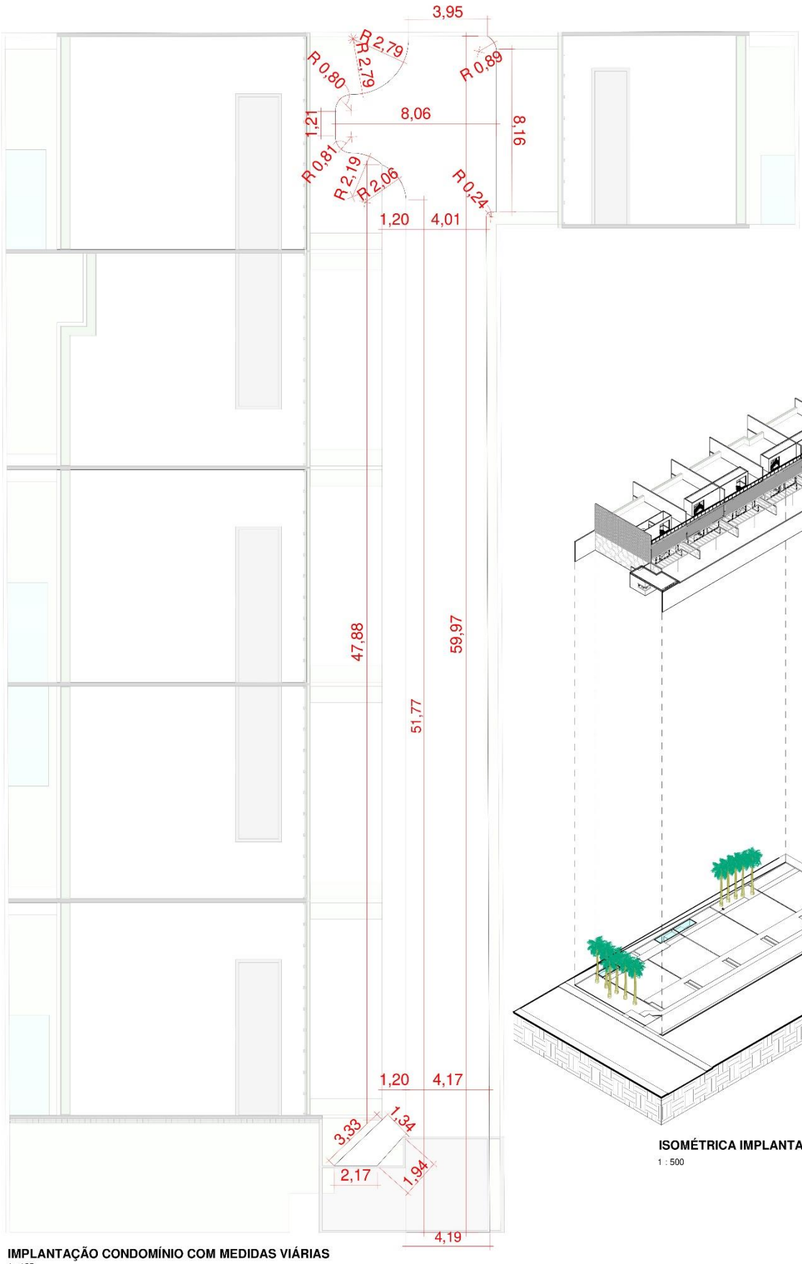

Foi solicitado a mim que fizesse um 3D detalhado, monstrando onde as peças de steel frame eram localizadas nas paredes do radier.

Tendo o 3D finalizado, pude realizar os desenhos de detalhamentos das peças , mostrando as elevações, isometricas explodidas e plantas que estavam separadas por nomes e tamanhos para facilitar na hora da montagem e colocação das estruturas em steel frame.
