O SISTEMA

Tecnologia européia na América do Sul

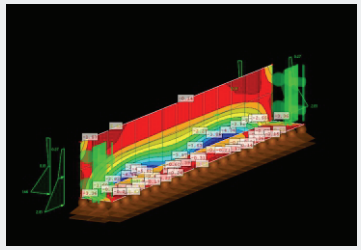

As construções utilizam tecnologia de painéis maciços de concreto já muito difundida na Europa e que a Nova Canaã utiliza para executar projetos residenciais de várias metragens, atendendo as necessidades do mercado brasileiro. São diversos modelos padronizados a sua escolha com projetos de alto padrão arquitetônico, qualidade, segurança e requinte, a um custo relativamente mais baixo que as construções tradicionais.

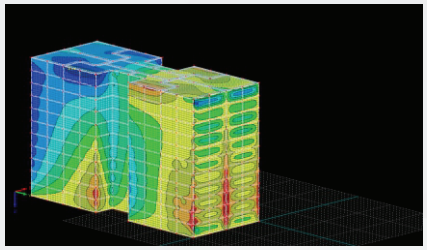

As partes da casa são produzidas em fábrica, com tecnologia de ponta necessária para obtenção de uma obra sólida e de execução rápida.

VANTAGENS DO SISTEMA

Aumento da área útil em relação a espessura da parede;
O painel é estrutura e vedação ao mesmo tempo;
Não necessita reboco interno, por fora somente pintura;
Montagem rápida e limpa. Uma casa de 100,00m² é montada em um dia. Monta-semais com redução de prazos de execução e se “Tempo é dinheiro” , este é o maior benefício. Lucro dividido em 2 anos é dobrado se a execução durar apenas 1 ano;
Menor custo final (25% menos em média);
Controle dos procedimentos em fábrica;
Alta produtividade;
Viabilidade de execução em áreas menos estruturadas, uma vez que não depende de mão de obra local;
Possibilidade do emprego de revestimentos como cerâmica, texturas entre outras já na concretagem em fábrica;
Confiabilidade e alto controle tecnológico com garantia, segurança e desempenho;
Sistemas mecanizados de produção e montagem;
Menor dependência de mão de obra especifica de construção;
Valor de desperdício de obra perto de 0%;
Procedimentos internacionais testados há mais de 50 anos;
Atende as normas de conforto ambiental e estrutural;
Possui norma NBR do sistema com aceitação.

FABRICAÇÃO

Fabricação para atender qualquer demanda, em qualquer país. Podendo ser executado no próprio canteiro de obra, dependendo do volume de obra.
